Fracture Nursing Care Management: Study Guide Management of a patient with fracture can belong to either emergent or post-emergent. Immediately after injury, if a fracture is suspected, it is important to immobilize the body part before the patient is moved. Adequate splinting is essential to prevent movement of fracture fragments. Bone Fractures Management and Treatment | Cleveland Clinic Medication may also be prescribed to ease the pain of the fracture. Traction may also be used to stabilize and realign fractures before surgery. Traction uses a system of pulleys and weights to stretch the muscles and tendons around the broken bone. If a fracture is bad enough, the patient may need surgery.
